An Analytical Procedure is the most important key in Analytical Method Validation. The analytical procedure defines characteristics of Drug Product or Drug Substance also gives acceptance criteria for the same. there are two Types of Analytical Procedures first is Specifications and standard test method in Pharmacopoeias or Pharmacopoeial methods and second one Non-Pharmacopoeial method or method which is developed In-house and approved by the National Regulatory Authority.

1.2 The manufacturer should demonstrate (through validation) that the analytical procedure is suitable for its intended purpose. 1.3 Analytical methods, whether or not they indicate stability, should be validated.

## ANALYTICAL METHOD VALIDATION - Pharmaceutical Guidance

Analytical method validation is an essential requirement to perform the chemical evaluation [ 1, 2, 3 ]. Method validation is a procedure of performing numerous assessments designed to verify that an analytical test system is suitable for its intended reason and is capable of providing beneficial and legitimate analytical data [ 4, 5, 6, 7, 8 ].
